

Revised Homework #3

You are to use the Meetup API for this assignment. First, pick a search criteria for groups, such as a zip code or a search term, like in class. Then answer the following with the returned results:

1. Which group is the most popular (i.e., has the most members)?
2. For this group, which member is the most active (i.e., belongs to the most groups)?
3. Considering only the most active user's groups, which group is the most popular?

Additionally, I want you to practice two good coding habits. (1) Functionalize your code. It's okay if you have to go back and do this after the fact rather than building up the code as functions from the start. (2) Write succinct, informative comments where necessary. Commenting your code is a skill, too.
